Sunburst Software Solutions, Inc. Launches Updated Version of Construction Application for Payment Solution to Share Data With QuickBooks® 2005 Products.

Construction Application for Payment Solution's Integration with QuickBooks® Helps Growing Businesses Save Time and Money!

West Charleston, VT: November 15, 2004 - Sunburst Software Solutions, Inc. today announced that construction Application for Payment Solution (CAPS) will now share data with Intuit's QuickBooks® software products - including QuickBooks Pro/Premier Editions 2005, and Enterprise Solutions 5.0. This exchange of critical data from Estimates, Progress Invoices, and Job records in QuickBooks® with CAPS allows contractors to quickly and efficiently generate modified AIA type billings on plain paper or on original AIA G-702 and G-703® forms that they purchase and feed into their printers. This process will help growing businesses who use both products to manage their business more efficiently - saving valuable time, money, and resources.

"Construction Application for Payment Solution (CAPS) is a perfect fit for companies that want to combine the ease-of use of QuickBooks® with effective industry-specific billing protocols" says Nancy Smyth, President of Sunburst Software Solutions, Inc. "We recognize that growing business owners juggle many daily tasks and that they are constantly looking for ways to streamline their operations. Enabling the exchange of data between CAPS and QuickBooks® will help growing businesses save time and manage their resources more efficiently allowing them to actually spend more time running their business."

Construction Application for Payment Solution, now in it's fourth year, is an affordable tool that allows users to easily create, organize and retrieve their project billing information, which they have already completed in QuickBooks® and generate it without risk of transposition errors in an mandated industry standard format and is currently being used by General Contractors, Developers, and Subcontractors in a wide variety of industry specific situations.

"The sharing of data between applications such as Construction Application for Payment Solution and the QuickBooks® Financial Management Software products helps small businesses avoid having to manually enter the same data in both applications, which takes a lot of time and can result in data entry errors," said Ed Schaffer, business leader of the Intuit Developer Network. "Sunburst Software Solutions is a perfect example of how Intuit Developer Network members are successfully using the QuickBooks® SDK to bring valuable applications to Intuit's small business customers. The Intuit Developer Network will continue to help members like Sunburst to address small businesses' needs for easy-to-use products that are integrated and customized for their specific business requirements."
